EMPLOYMENT **University of Michigan, Ross School of Business**, Ann Arbor, MI
Assistant Professor of Finance, Jul 2018 -

Board of Governors of the Federal Reserve System, Washington, DC
Economist, Division of Monetary Affairs, Sep 2016 - June 2018

EDUCATION **New York University Stern School of Business**, New York, NY
Ph.D., Finance, Sep 2011 - May 2016
Dissertation: *“Essays in Financial Institutions and Central Banking”*
Committee: Viral Acharya (chair), Philipp Schnabl (chair), Alexi Savov, Andres Liberman

London School of Economics and Political Science, London
M.Sc., Finance and Economics, Research Track, Sep 2010 - Jun 2011

Columbia University, New York, NY
Exchange Student, Economics, Jan 2010 - May 2010

Università Bocconi, Milan
B.Sc., Economics, Sep 2007 - Jul 2010

RESEARCH INTERESTS Transmission of Monetary Policy, Macroprudential Regulation
Financial Intermediation, Bank Portfolio Choice
Sovereign Crises, Government Bond Markets, Sovereign Debt Capacity

PRIZES AND AWARDS Young Economist Award, ECB Forum on Central Banking, 2016
Edwin Elton Prize for the Best Finance Job Market Paper, 2015
3rd SUERF/UniCredit & Universities Foundation Research Prize, 2015
Klaus Liebscher Award, 2015
NYU Stern Teaching Commendation, 2014
D. Graifman Memorial Award for the Best 2nd Year Summer Paper in Finance at Stern, 2013

FELLOWSHIPS AND GRANTS Jules Bogen Fellowship, 2015-2016
Macro Financial Modeling Group (Becker Friedman Institute) Dissertation Fellowship, 2014
Unicredit & Universities Crivelli Europe, Runner-up, 2012
NYU Stern School-wide Doctoral Fellowship, 2011-2015
Ph.D. Director’s Fellowship, 2011-2015

1) The Effect of Central Bank Liquidity Injections on Bank Credit Supply (with Luisa Carpinelli), January 2018

- *AFA 2017, RFS BSRMM 2017*
- *Young Economist Award, ECB Forum on Central Banking, 2016*
- *Edwin Elton Prize for the Best NYU Stern Finance Job Market Paper*
- *Media Coverage: Wall Street Journal*

Abstract: We analyze central bank provisions of collateralized liquidity to banks following a wholesale funding dry-up. Combining firm-level data from the Italian loan credit registry with supervisory data on security-level holdings, we examine the European Central Bank's three-year Long Term Refinancing Operations. We find that (i) long-term, but not short-term, central bank liquidity helped banks hit by the dry-up restore their credit supply to firms; (ii) banks used most liquidity to buy government bonds; and (iii) a government guarantee, by granting banks hit by the dry-up access to central bank liquidity, was necessary for the transmission of liquidity to firms.

2) Why Are Banks Not Recapitalized During Crises?, July 2017

- *Revision requested at the Journal of Financial Economics*
- *EFA 2016, OxFIT 2016, Barcelona GSE Summer Forum 2015*
- *Shortlisted, Ieke van den Burg Prize for Research on Systemic Risk, 2016*
- *2015 Klaus Liebscher Award*

Abstract: I develop a model where the sovereign debt capacity depends on the capitalization of domestic banks. Low-capital banks optimally tilt their government bond portfolio toward domestic securities, linking their destiny to that of the sovereign. If the sovereign risk is sufficiently high, low-capital banks reduce private lending to further increase their holdings of domestic government bonds, lowering sovereign yields and supporting the home sovereign debt capacity. The model rationalizes, in the context of the eurozone periphery, the increase in domestic government bond holdings, the reduction of bank credit supply, and the prolonged fragility of the financial sector.

3) The (Unintended?) Consequence of the Largest Liquidity Injection Ever (with Miguel Faria-e-Castro and Luis Fonseca), January 2018

- *AFA 2016, SED 2016, CFIC 2017*
- *3rd SUERF/UniCredit & Universities Foundation Research Prize, 2015*
- *Media Coverage: Wall Street Journal, Frankfurter Allgemeine Zeitung*

Abstract: We show that the design of lender-of-last-resort interventions can exacerbate the bank-sovereign nexus. During sovereign crises, central bank provision of long-term liquidity incentivizes banks to purchase high-yield eligible collateral securities matching the maturity of the central bank loans. Using unique security-level data, we find that the European Central Bank's three-year Long-Term Refinancing Operation caused Portuguese banks to purchase short-term domestic government bonds, equivalent to 10.6% of amounts outstanding, and pledge them to obtain central bank liquidity. The steepening of eurozone peripheral sovereign yield curves right after the policy announcement is consistent with the equilibrium effects of this "collateral trade."

4) The Anatomy of the Transmission of Macroprudential Policies: Evidence from Ireland (w. Viral Acharya, Katharina Bergant, Tim Eisert, Fergal McCann), January 2018

- *RFS BSRMM 2018, FIRS 2018*

Abstract: We analyze the transmission of macroprudential policies aimed at limiting household leverage and preserving financial stability. Combining supervisory loan-level and house price data, we examine the effect of loan-to-income and loan-to-value limits on residential mortgages in Ireland on mortgage credit, house prices, and financial stability. We find that banks re-

allocate their mortgage credit toward high-income borrowers and areas with low house price appreciation. This reallocation slows down house prices in “hot” areas, but allows banks to maintain a stable risk exposure as they increase mortgage credit to historically risky borrowers, corporate credit to risky firms, and holdings of high-yield securities.

OTHER PAPERS **5) The Portuguese Banking System During the Sovereign Debt Crisis**, with Miguel Faria-e-Castro and Luis Fonseca, *Banco de Portugal Economic Studies*, 1(2), pp. 43-80, July 2015
